

- This Serpent 966 EVO update sheet shows the main changes to the 966 kit, and also shows some optionals.
- modified radioplate requires different assembly of the top-screw in the servo-saver.
  - the new 2-speed brackets have machined nylon busings to seat the anti-roll bar bearings and same for the main 2-speed axle bearing, to prevent play due to vibrations. Item: **903357**
  - the kit includes a one piece mono-type brake-disk, instead of the separate plates with mid-mounted cooling disk.
  - the kit comes now standard with the wire type rear anti-roll bar, as it's mainly used.
- The adjustable one with blades is optional Item: **909335**
