

ERYX 3.0

Alu chassis stiffner Eryx 3.0 #401617

Team Serpent is proud to introduce the new **Optional Aluminium Chassis Stiffner (#401617)** for the S411 ERYX platform.

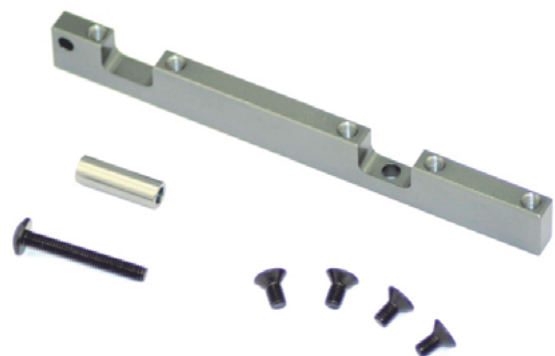

The stiffner was part of the development and testing of the ERYX project, and is now ready for release. The ERYX chassis already has one stiffner post standard in the kit, which mounts in the rear center. This extra alu stiffner can be mounted in the center, and then can be used either without the stiffner post front and rear, or just fron or rear or even both.

As flex plays an essential role in set-up, this adds another element to experiment with to obtain even better results. Attached images show:

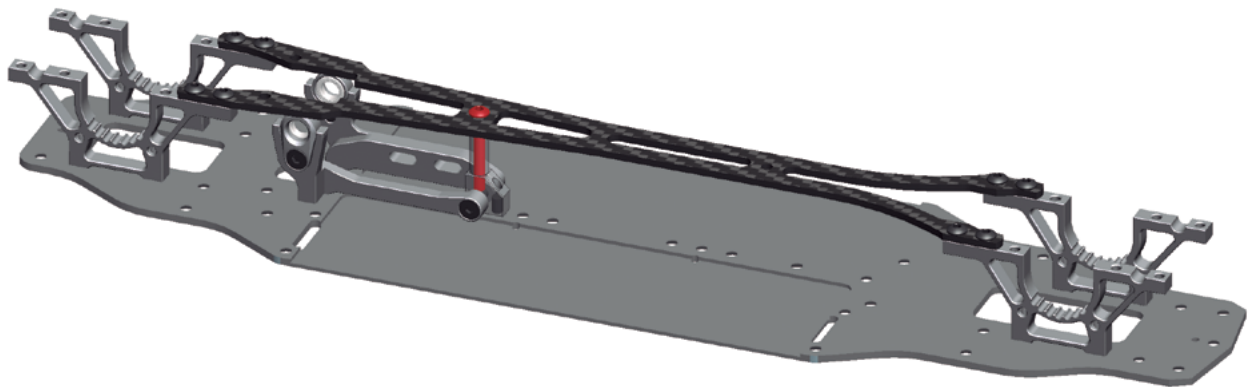

- Kit standard
- Kit soft
- Front stiff
- Rear Stiff
- Full stiff

Its all easy and fast to mount.

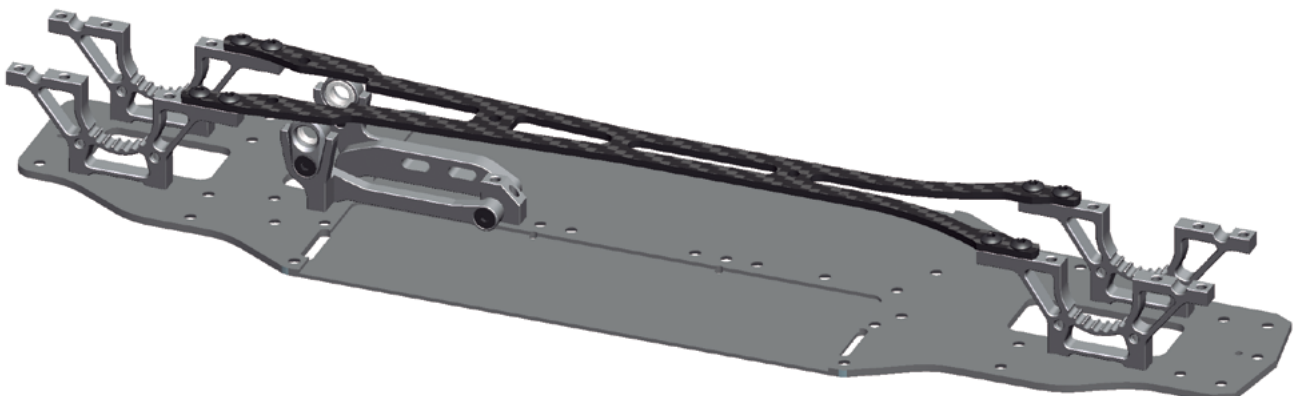

Enjoy racing!
