

# VIPER 990

1/8 ON ROAD SCALE

INSTRUCTION  
MANUAL

SERPENT

## INTRODUCTION

The Serpent Viper 990 is designed to be a world champion, while still being easy to use, assemble, and set up. The Serpent Viper 990 offers state of the art specifications and leads the way in chassis design, using all the knowledge we have from 1/8 scale racing into this design too. Continuously pushing the performance envelope, Serpent's engineers have added new and innovative features that help take your Serpent Viper 990 into the winner's circle.

Designed by Michael Salven

Team Serpent  
Multiple World Champions

## INSTRUCTIONS

Serpent's long tradition of excellence extends to the instruction manuals, and this instruction manual is no exception. The easy-to-follow layout is richly illustrated with 3D-rendered full-color images to make your building experience quick and easy. Following the instructions will result in a well-built, high-performance race-car that will soon be able to unleash its full potential at the racetrack. The kit includes bags, with bag numbers, which refer to the same step in the manual. Open only the indicated bag(s) per step and finish that part of the assembly. Remaining parts will be needed later on in the assembly process.

## PLASTIC PARTS

The Serpent moulded parts are very durable and hard. When assembling longer screws in new composite parts, make sure to use new hex bits in your (power) tools. Pre-threading also helps to avoid screw damage.

## SETUP

In certain assembly steps you need to make basic adjustments, which will give you a good initial setup for your Serpent Viper 990. Fine-tuning the initial setup is an essential part of building a high-performance racecar like your Serpent Viper 990.

## EXPLODED VIEWS AND PARTS LIST

The exploded views and parts lists for the Serpent Viper 990 are presented in the Reference Guide section in the back of this manual. The exploded views show all the 990 parts of a particular assembly step along with the Serpent part number and hotlink to the Serpent website. Part numbers in orange indicates that this part is an optional. Optionals part names and numbers are showed below.

## CUSTOMER SERVICE

Serpent has made a strong effort to make this manual as complete and clear as possible. Additional info may be published in our website: [www.serpent.com](http://www.serpent.com) or you may ask your dealer or the Serpent distributor for advice, or email Serpent direct: [info@serpent.com](mailto:info@serpent.com). The Serpent Facebook, Twitter and Youtube pages give additional means of support and communications.

## SAFETY

Read and take note of the 'Read this First section' before proceeding to assemble the car-kit. This car-kit is intended for persons aged 16 or older.

## READ THIS FIRST!

- This is a highly technical hobby product, intended to be used in a safe racing environment. This car is capable of speeds in excess of 80 km/h or 50mph. Please follow these guidelines when building and operating this model.
- Parental guidance is required when the builder/user of this car is under 16.
- Follow the building instructions. If in doubt, contact your dealer or importer.
- Be sure to use the proper tools when assembling the car. Always exercise caution when using electric tools, knives and other sharp objects.
- Be careful when using liquids like lubrication oil, fuel or glue. Do not swallow.
- Follow the manufacturer's instruction in case you experience irritation after using the product.
- Be careful when operating the car. Stay away from any rotating parts such as wheels, gears and transmission. Stay away from motor, engine and exhaust pipe system or speedo during and immediately after use, as these parts may be very hot. We advise to use protective hand gloves.
- Only operate this car in a safe environment, like a special racing track or a closed parking lot. Avoid using this car on public roads, crowded places or near infants.
- Before operating this car, always check the mechanical status of the car. Also check that the transmitter and receiver frequencies correspond and are not used by any other racer at the same time. Check that the batteries of the transmitter and receiver are fully charged.
- After use, always check all the mechanics of the car. We advise to clean the car immediately after use, and inspect the parts for wear or fractures. Replace when necessary. Do not use water, methanol, thinner or other solvents to clean the car.
- Empty the fuel tank (depending on model) if needed and disconnect the receiver battery.
- Store the car in a dry and heated place to avoid corrosion of metal parts.
- Avoid using this car in wet conditions as the water will cause corrosion on the metal parts and bearings and these parts will cease to function properly. If driven in the wet, ensure that all the electric equipment is waterproofed and after use, that all moving parts are dried immediately.

## LINES DESCRIPTION

Each step contains a variety of numbers, lines, and symbols. The numbers represent the order in which the parts should be assembled. The lines are described below.

Step number; the order in which you should assemble the indicated parts

Length after assembly

Assembly path of one item into another

Group of items (within lines) should be assembled first

Direction the item should be moved

Glue one item to another

Connect one item to another

Gap between two items

Press/Insert one item into another

## ICONS DESCRIPTION

Each step contains a variety of symbols described below.

Carefull, read and check very well.

Apply a small amount of cyano glue. Use wear protection for eyes and hands.

Detail view to explain assembly or order of parts better.

Default set-up: This symbol indicates the default setup.

Grease: apply a small amount of grease to the parts shown.

Silicone grease: apply a small amount of grease to the parts shown.

Thread lock: apply a small amount on the parts shown. Before to apply the threadlock, make sure to degrease the parts very well, as otherwise the threadlock will not work.

Silicone oil: use the indicated silicone oil for the shocks and differentials.

Oil: apply a small amount of oil to the parts shown.

Left and right parts should be assembled in the same way.

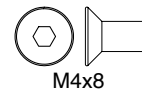

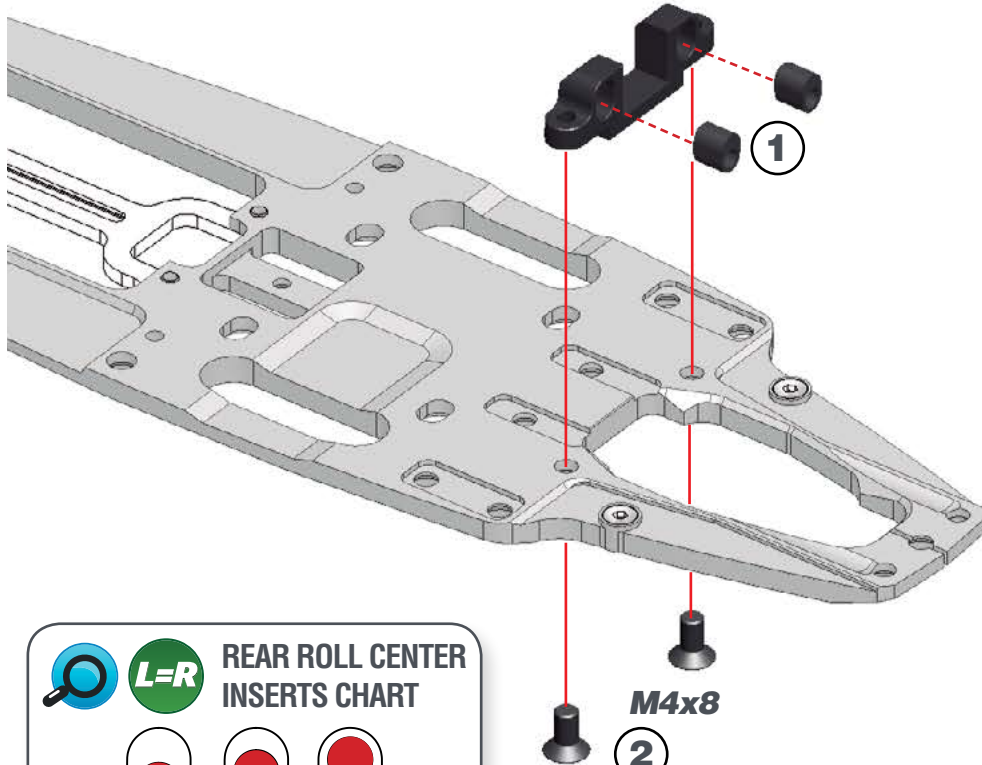

Parts or items not included in the kit.

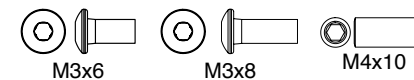

Optional part, not standard in the kit.

## **L=R** REAR REACTIVE STEERING SYSTEM

Serpent 990 introduce the Active rear toe-in. It brings a new dimension to setup changing the toe-in characteristics of the rear tires under rolling effect. It allows to run less static toe-in and still have a good traction coming out of the corner.

Serpent RRS System brings the possibility to adjust the amount of toe-change over the suspension travel from zero to positive or negative toe-change depending on the linking point selected as explained below:

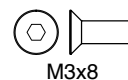

Toe in will increase under acceleration (compression) and will decrease under braking (extension).

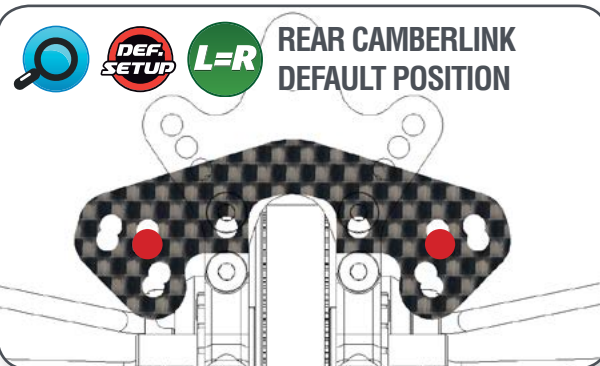

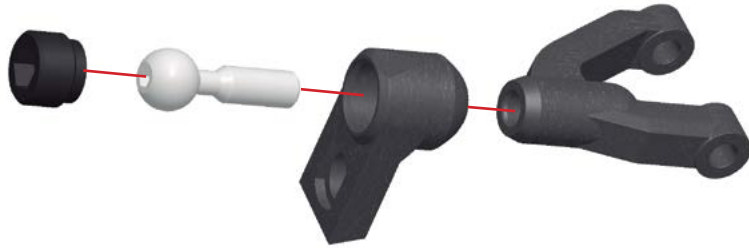

Toe in will not change over the suspension travel.

Toe in will decrease under acceleration (compression) and will increase under braking (extension).

## STEP 14

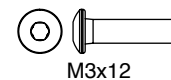

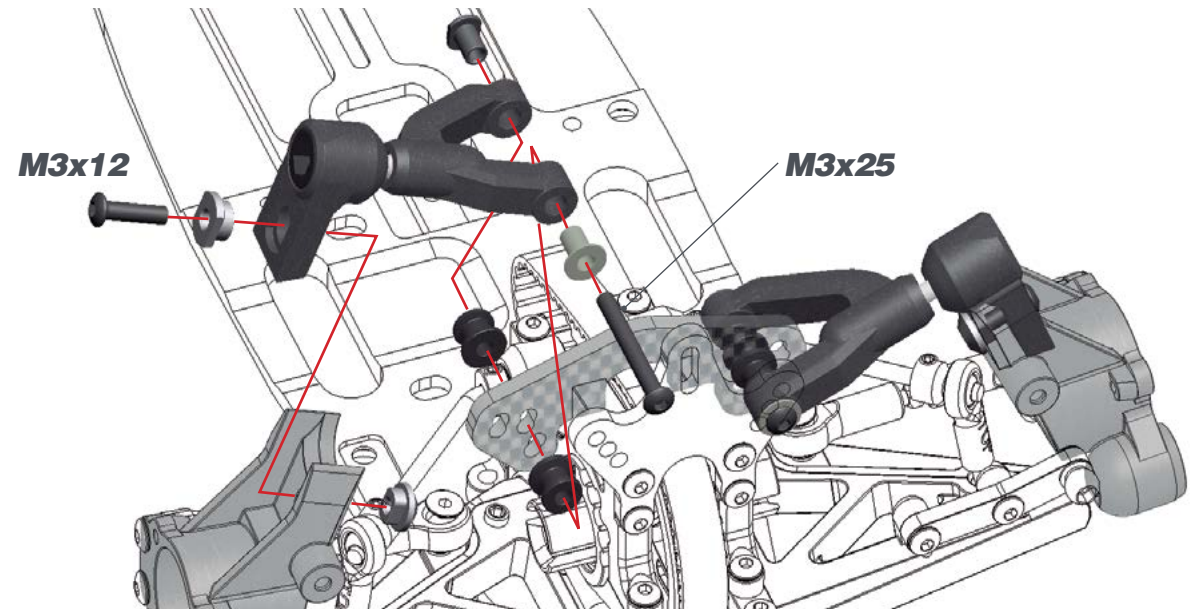

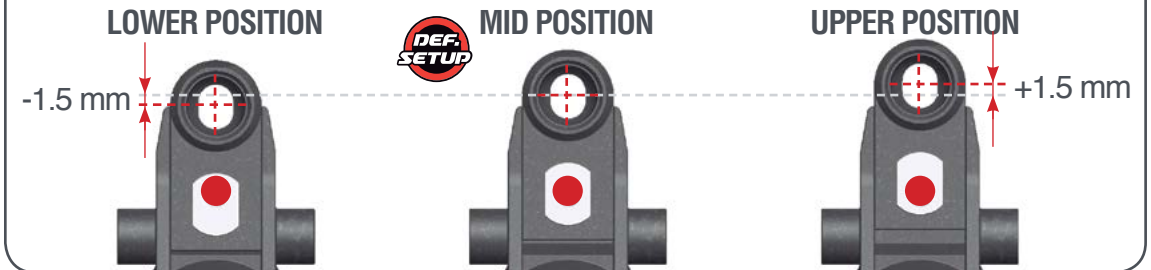

### 14.1

### 14.2

#### **L=R** REAR UPPER WHSIBONE ANGLE

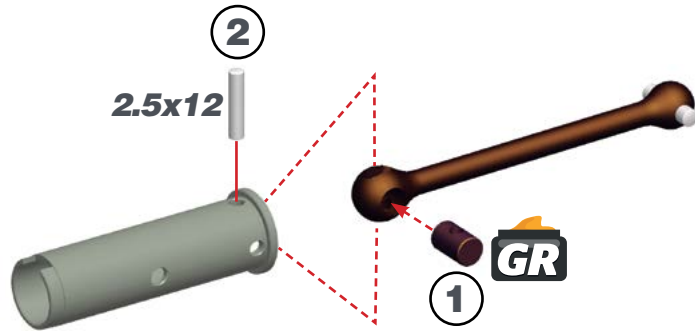

Serpent introduces a new way to adjust the height of the upper pivot on the upright. By changing the excenter, it is possible to move the position up or down by 1.5mm as well as using a “neutral” position.

### STEP 33

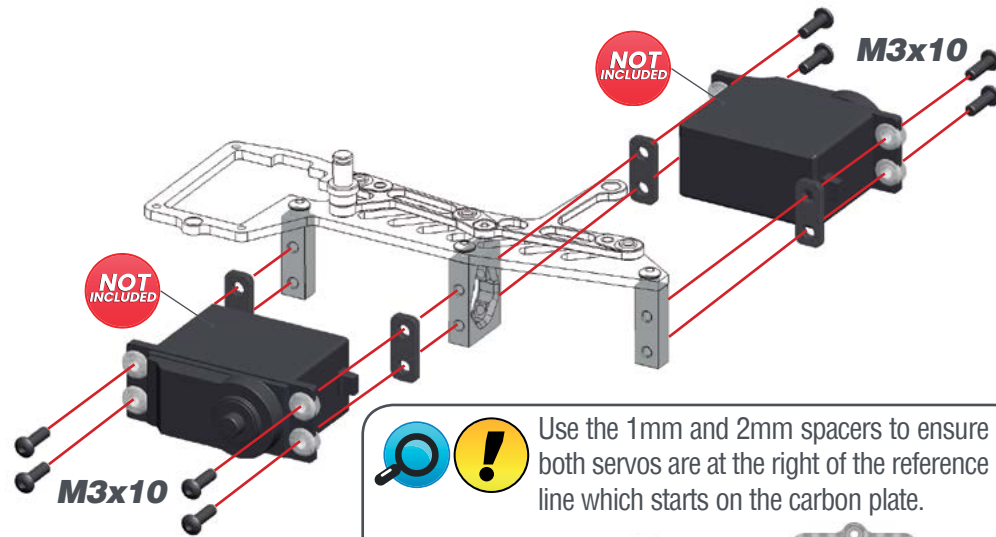

#### RADIO BOX ASSEMBLY

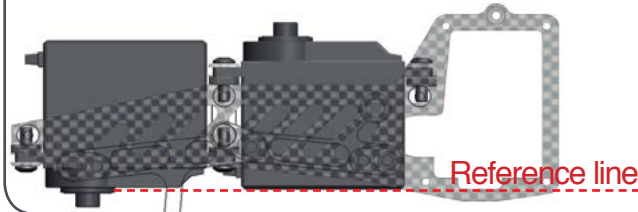

The small servo mountings have a fixing protrusion which is excentric. Therefore it is possible to assemble them in two different ways in order to adapt the servo mountings to the different servo brands.

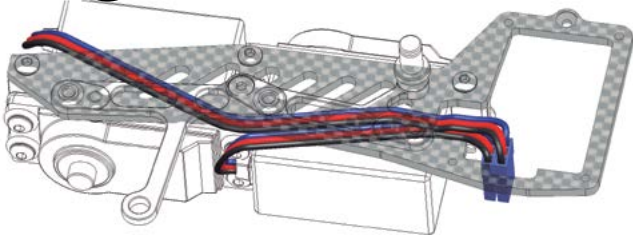

## STEP 34

Use the 1mm and 2mm spacers to ensure both servos are at the right of the reference line which starts on the carbon plate.

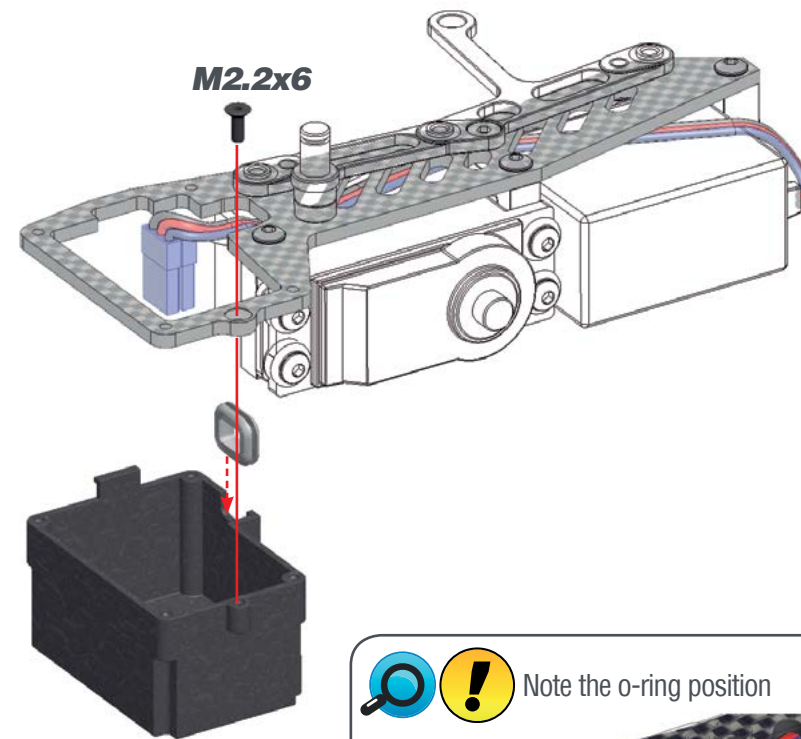

Note the servo's wire diagram

### SHOCKS BAG

#### 52.1

Use some silicone oil during the assembly.

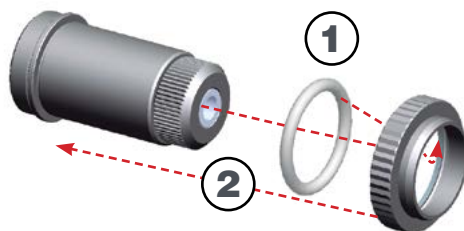

Note the correct orientation of the shock spacers.

#### 52.2

Insert the o-ring inside the spring collar.

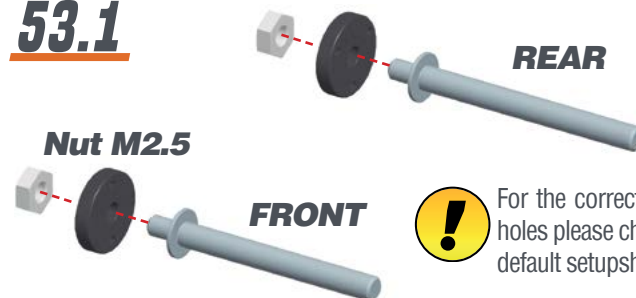

Note the correct position of the o-ring.

## STEP 53

#### 53.1

Nut M2.5

REAR

FRONT

For the correct piston holes please check the default setupsheet.

Use the shorter shock shaft in the front and the longer one in the rear shock absorber.

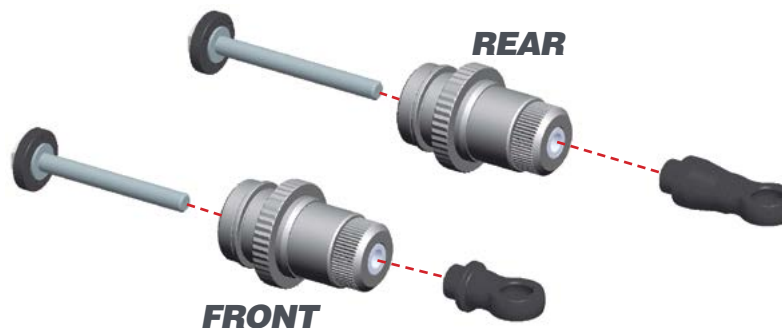

REAR

FRONT

#### 53.2

Use some silicone oil during the assembly.

REAR

FRONT

Nut M2.5

**STEP 54****54.1**

Push the shock top and the membrane into the shock cap.

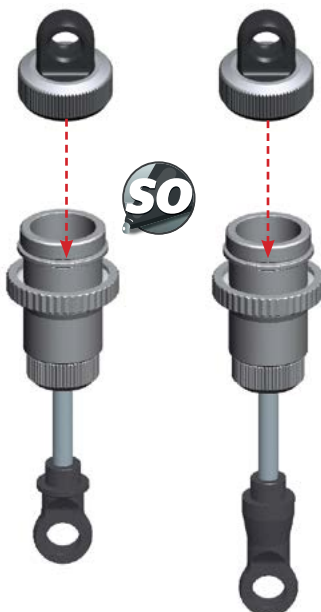

**54.2**

1- Fill up with silicone oil fully using the silicone oil supplied in the kit. For the correct cst value please check the default setupsheet.

2- Extend the shockrod fully

3- Move the shockrod slowly up and down to let ALL air bubbles escape.

4- Close top only 3/4.

**54.3**

1-Bleed: push the shockrod all the way in slowly, to allow excessive oil to escape.

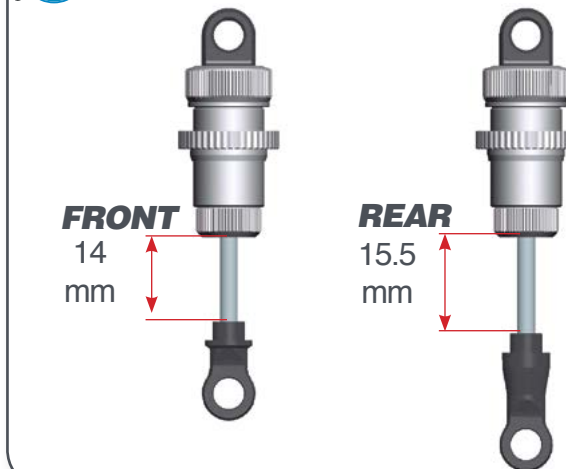

2- Close the shock cap completely.

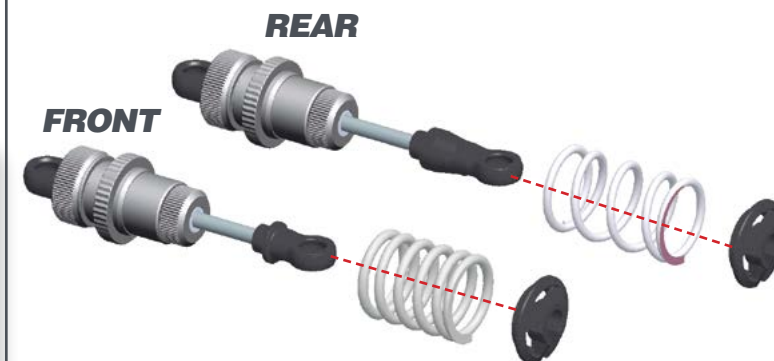

**SHOCKS LENGTH:** Measure the shock length fully extended.

**FRONT**  
14  
mm

**REAR**  
15.5  
mm

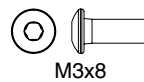

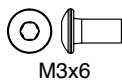

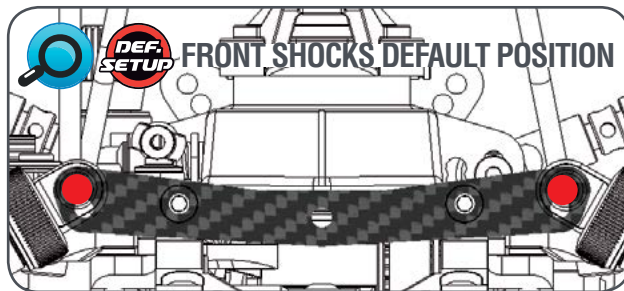

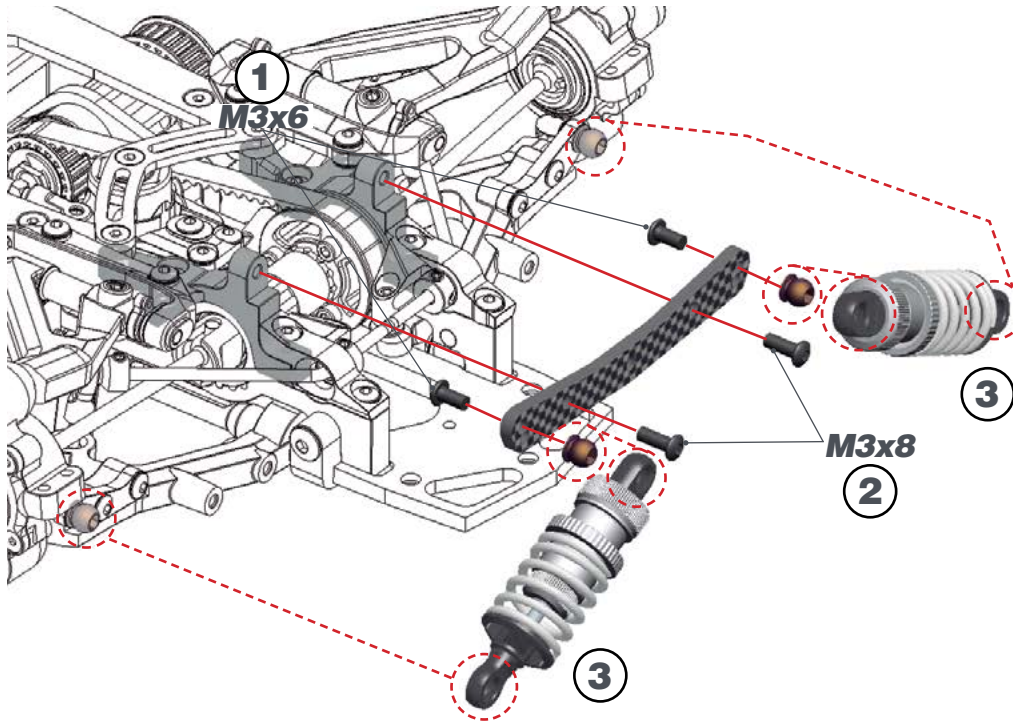

**STEP 55**

Assemble the spring and spring-cup (align correctly) to complete the shock.

## STEP 61

### CLUTCH BAG

#### 61.1

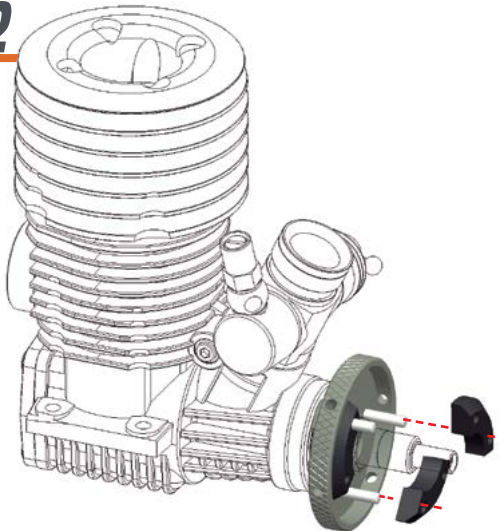

1- To align the clutchgears with the 2-speed gears, it may be needed to use shim(s) 6x8x0.5mm (for 6mm shaft) or 7x8x0.5 (for 7mm shaft) behind the cone. This you can see only after assembling the clutch.

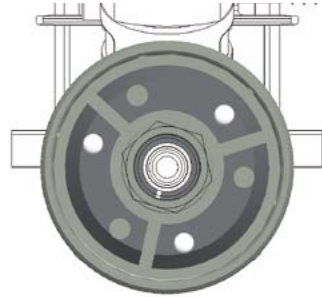

2- The holes in the side of the flywheel can be used to block the flywheel (with short allen tool) through the bottom of the chassis, when the engine/clutch is mounted in the car. It's easier to tighten or loosen the pre-load on the clutch spring that way.

NOT INCLUDED

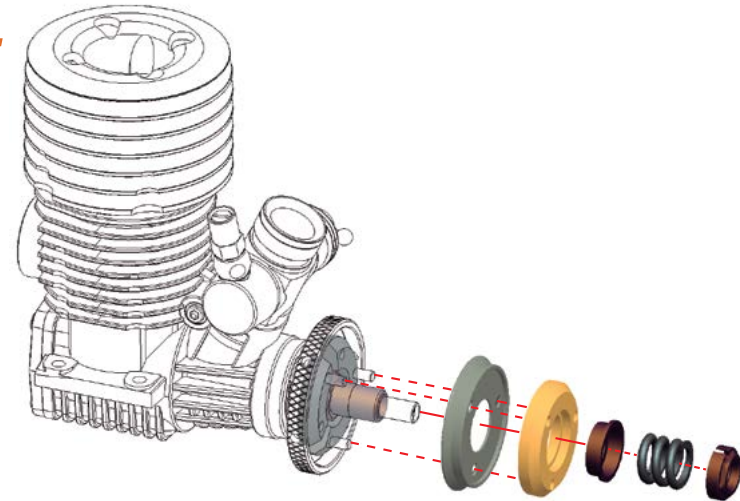

#### 61.2

Note the orientation of the flyweights. Use the right hole for having a more aggressive clutch

#### 62.1

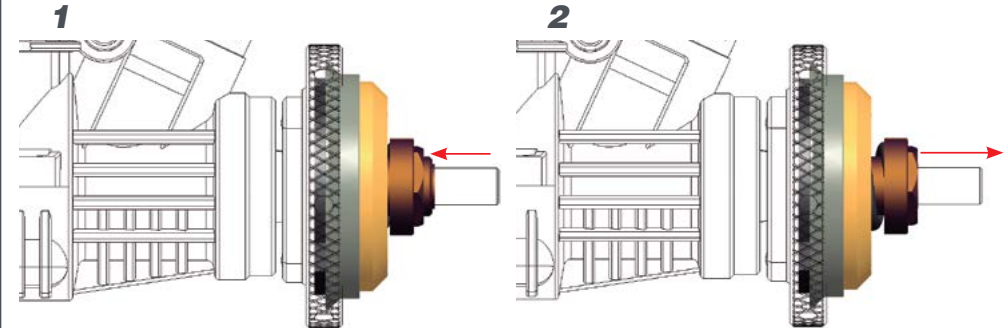

#### 62.2

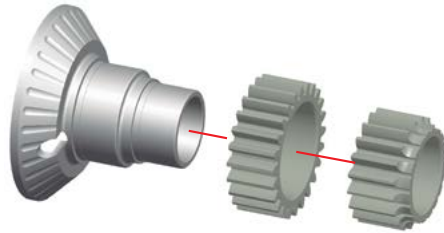

For adjusting the default clutch spring tension:

- 1- Screw in the adjusting nut all the way.
- 2- Unscrew it one and a half turns.
- 3- Fine tune the setup of your clutch on the track according to your driving style, track and weather conditions.

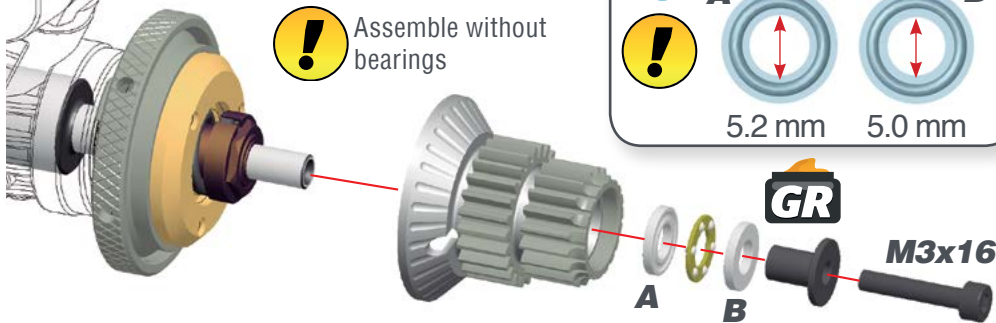

## STEP 63

### 63.1

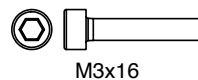

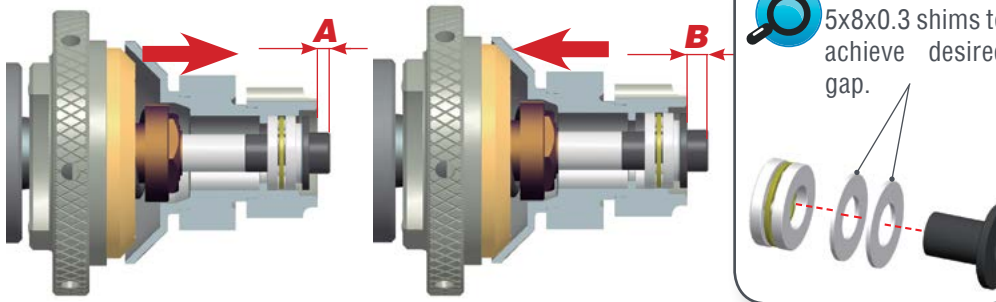

### 63.2 SETTING THE CLUTCH GAP

**63.2** Clutch gap is calculated taking A and B measurements showed below.  
 $GAP = B - A$ . The advised gap is between 0.6 and 0.8mm

Pull the clutch bell forward

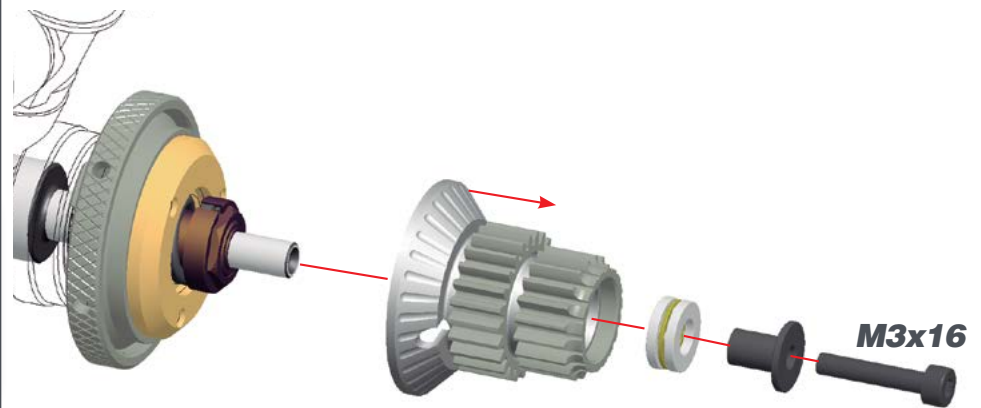

Push the clutchbell back

## STEP 64

### 64.1

Disassemble the clutch bell.

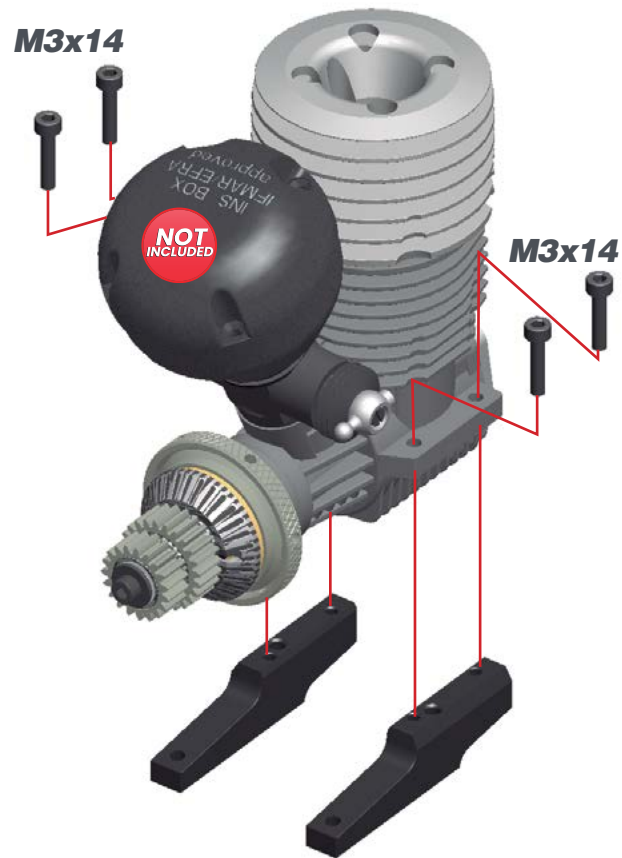

### 64.2 SETTING THE CLUTCH END PLAY
