**MBL COMPETITION S9XX**

Our new MBL competition belts feature a special construction of the internal Kevlar reinforcement fibers, combined with a new material of the belt itself.

The belt improves the drivetrain efficiency by 50% due to reducing the external as well as the internal friction.

The result is a super-free transmission which improves top speed and reduces the stress on the engine. It also helps to improve fuel consumption.

This belt is a must for the serious racer!!
